

FlowMLLab | Cylinder wake at $Re = 100$

D2Q9 TRT lattice Boltzmann | 40 nodes per diameter | fixed domain, blockage = 12.5%

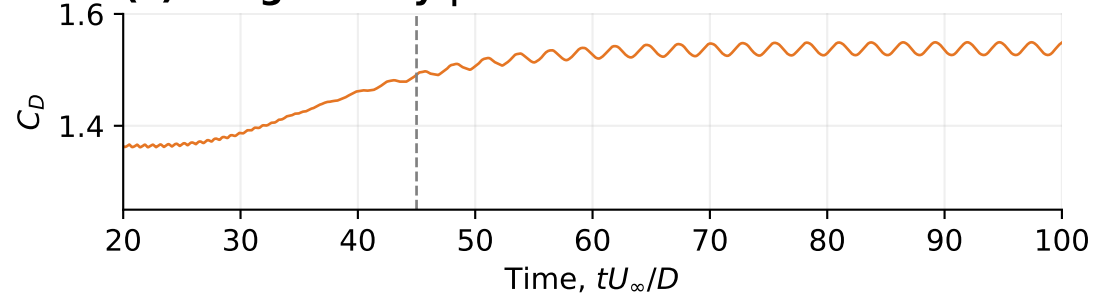

(a) Alternating vortex wake | D40, final field at $tU/D = 100$

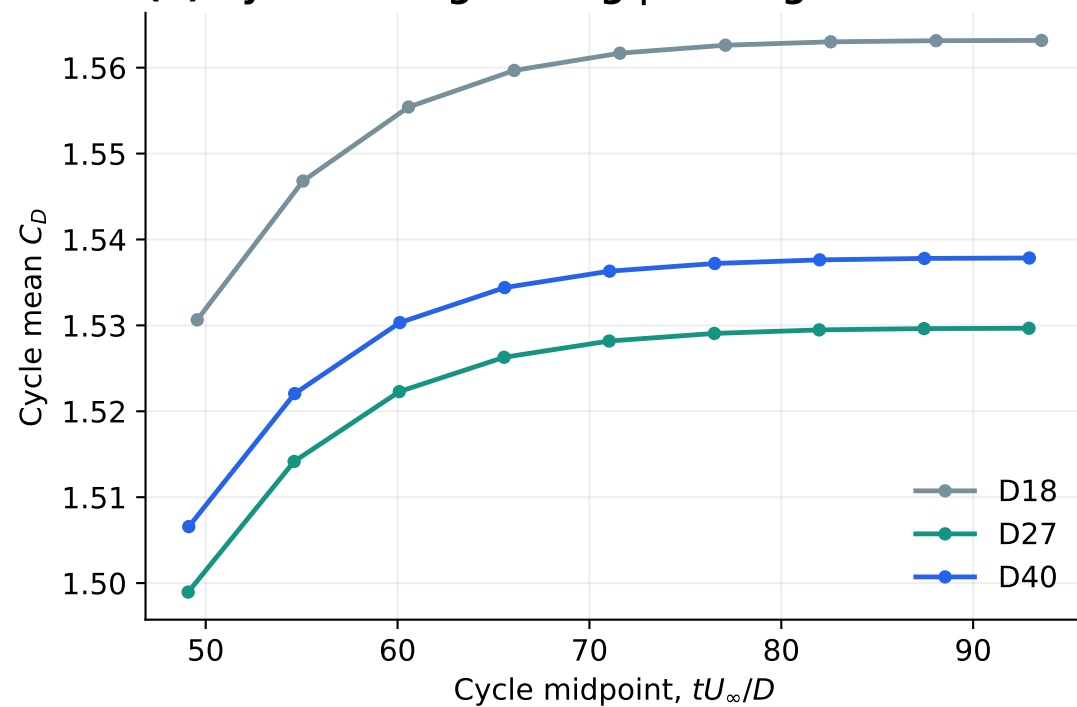

(b) Lift history | D40

(c) Drag history | D40

(d) Cycle-averaged drag | three grids

Teaching dataset: grid and domain independence are not established. Cycle means show temporal drift, not confidence intervals.
